

Decentral print server for heterogeneous worlds

*Manage your distributed print jobs professionally*

Océ

## Manage your distributed print jobs professionally

Globalisation has made the world a smaller place, and business and IT structures now routinely operate on a world-wide scale. The merging of computing environments that used to be separate has fuelled demand for new solutions and fresh ideas for managing and running distributed printing systems. Documents from all sorts of applications – Windows®, SAP R/3™ or the mainframe – can now be output either centrally or decentrally. Modern printing systems can provide you with the flexibility and choice of functions you need for dealing with these new requirements.

Océ's PRISMAoffice is a decentral print server that offers you a suite of control facilities for managing your entire print environment professionally: from simple desktop printers with single-figure ppm speeds, right through to the fastest PCL printing system in the world, the Océ Pagestream 440.

**Secure your investment with standards**  
When the company's annual print volumes are spiralling upward, you need to be sure of maximum efficiency from the printers you already have installed.

Featuring an intuitive, task-oriented Windows GUI and the open systems interfaces, Océ PRISMAoffice is not only a high power spool system that you can rely on for invariably first class support, it's also a sound investment for the future. With its extensive printing and spooling functionality, Océ PRISMAoffice offers a powerful enhancement to standard Windows printing, making spooling easier and at the same time more professional.

#### Stay on top of the world

Does your company have multiple locations? If so, as an IT manager, you need to deal with all printers and spools under your charge, not just the ones in your direct print environment.

The Print Manager Web in Océ PRISMAoffice makes your job easier. Over the web, you can now manage all the spool systems in your enterprise network domain with the same ease as your local environment.

#### Direct your print jobs

In face of tough competition, there's tremendous pressure to accelerate every single step in the production chain. And being up-to-date is more important than ever. Last-minute changes – to the number of copies or other job parameters, for example – are part and parcel of the daily routine.

Océ PRISMAoffice keeps your options open. You can correct or redirect print jobs up until the very last minute. Monitor print production, define job classes, shuffle the job queue or direct jobs to a different printer. And you can do all this without being anywhere near the printer. Do error and user accounting. Or use the optional gateway to output host data directly. All with superlative ease.

#### Keep tabs on your print costs

With the advent of network printing, cost control has become more and more difficult. Who is printing where, and, more importantly, how much is being printed, are questions that most managers need to have answered simply and accurately.

Featuring a simple but powerful accounting function, Océ PRISMAoffice puts you in control of what you're spending and enables the costs to be passed back to the submitter.

The professional printing solution sized to your requirements

Office and production printing each have different demand profiles, so Océ offers two versions of PRISMAoffice: the Light Edition (LE) and the Production Edition (PE).

Océ PRISMAoffice LE can operate with up to 32 printing systems – and give you professional control over the way your printers are run.

Océ PRISMAoffice PE is designed to run high performance PCL printing systems with speeds of up to 440 ppm. The Océ PRISMAoffice printer driver supports colour printing with Océ CustomTone®.

Distributed or centralised printing – Océ PRISMAoffice is always the right decision for printing in heterogeneous worlds.

# Printing for Professionals

---

Océ enables people to share information by offering products and services for the reproduction, presentation, distribution and management of documents. The international Océ Group supplies an extensive range of products and services, comprising high-quality printing and copying systems as well as the related consumables and imaging supplies. This range is largely developed, produced and marketed by Océ itself. Océ also takes care of the related service and financing for these systems. In addition, the products are selectively supplied via third parties.

Océ has total revenues of almost 3 billion Euro and employs over 20,000 people world-wide. Océ products are marketed in some 80 countries, with own Océ companies operating in over 30 countries.
