

What's new in YSoft SafeQ 5

The new version of the YSoft SafeQ print management solution includes several completely new features and numerous improvements to existing features – all designed to make sure YSoft SafeQ meets your needs. A key component of YSoft SafeQ 5 is the greatly improved and enhanced YSoft Payment System, which is especially beneficial for educational institutions, public libraries, or any other organization that accepts payment for print, copy, and scan services.

YSoft Payment System

A key requirement for schools, universities, libraries, and other institutions that want to make print services available to a wide range of users. Each user has a credit account to use for printing, copying, and scanning. The Payment System makes it easy for users to reload their accounts as necessary – and is simple to manage.

New browser-based embedded terminal

Fast response, a contemporary look, and a user-friendly, intuitive interface – you'll never want to work with any other printer user interface. This new generation of integrated terminals makes using MFPs easier and more convenient, throughout the day, day after day.

Mobile Print Server

We have shifted the freedom of printing and removed the dependency on Microsoft Office and LibreOffice. Print from anywhere at any time and then just pick up your document at the printer.

Management reports

Get a complete overview of your company's print environment with a single click. These new visually attractive, clear and simple reports let you see at a glance information such as the utilization of your MFPs, the top 5 users, and costs per individual departments.

High performance ORS

A single Offline Remote Spooler (ORS) can now support up to 200 printers – four times the number supported by previous versions. Limitations to the Private Cloud have been eliminated – so now you can use all the advanced features of YSoft SafeQ within complex print system architectures.

YSoft SafeQ 5

"Every new version of YSoft SafeQ has been a huge leap forward – embedded terminals in YSoft SafeQ 3.6, clustering and ORS technology in version 4. However, as I see it, YSoft SafeQ 5 is the biggest leap forward of them all, not only because of the significant new and improved features, but also – and perhaps most importantly – because of the technology, architecture, and the people we have onboard. Technology updates and improvements go hand in hand with improving user experience. I welcome you to try the new, more flexible, more scalable, more user-friendly YSoft SafeQ. High Five!" – Ondřej Krajiček, Chief Research Officer Y Soft Corporation

What's new in YSoft SafeQ 5?

YSoft Payment System

- Users can conveniently reload their credit accounts at staffed reload service points, self-service YSoft Payment Machines, or via PayPal. The Payment System is integrated with your organization's credit system already in use – for example, for the purchase of cafeteria meals or school supplies.
- Your organization can define different print system rights for different types of users. For example, university staff members' credit accounts can be periodically automatically replenished to a set amount, while students can reload their accounts as necessary.
- Several methods are available for users to reload their accounts:
 1. **Staffed reload service point** – A location staffed by an employee and equipped with a computer that includes Cash Desk application and an Internet connection. The employee receives payments and reloads accounts.
 2. **Self-service** – YSoft Payment Machine that accepts coins and bills.
 3. **Credit card** – PayPal gateway.
- Easy integration with third-party systems: Merchant API, Cash Desk API, Administration API.

Mobile Print

- Print anything, anytime – wherever you are – with no limitations.
- Revolutionary new built-in document conversion. Microsoft Office and LibreOffice are no longer required.
- High stability, high performance in large deployments.

High-performance ORS

- Dramatically improved Offline Remote Spooler technology.
- Designed and tuned for large print environments with many branches and thousands of MFPs – 200 MFPs can be connected to a single ORS.
- Supports Job Roaming in Near Roaming Groups.
- Optimized, more efficient ORS networks deliver considerable cost savings.

New browser-based embedded terminal

- Faster user interaction.
- A comprehensive portfolio of operations that the user can do at the MFP.
- User-friendly interface with a new design.
- New platform enables faster integration with more brands of MFPs.

Management reports

- Automatically generated or on-demand reports provide comprehensive overviews of the entire print environment for your company's top management and anyone else who needs structured, easy-to-read reports.
- Reports can include information about the entire company or selected departments, users, and printers.
- Reports can cover a selected time period – year, quarter, month.
- Several formats for convenient sharing – PDF, HTML, DOC.
