

Mobile Print module

Get complete freedom
– print at any time, from anywhere

From any means of transport, the waiting room at the doctor or from home – this module allows you to send jobs to print literally from anywhere. You are not dependent on a computer or a connection to the local network; you only need a smartphone or tablet with a mobile connection to the Internet.

How Mobile Print will simplify your life

Administrator

- If our employee, business partner or students want to print from their private instruments, I do not have to waste time by installing the printer drivers on each one of them. And even so, they can print anything easily with the help of Mobile Print.

Mobile Print module properties

- Sending of print jobs via email or via the web interface of the mobile printing
- Option to print documents in various formats (PDF, DOC, XLS, PPT, JPEG, PNG, etc.)

Company manager

- Mobile Print enhances the productivity of our employees. Because they can send the documents to print directly from their mobile that they will subsequently need after their arrival, on the way to a meeting, etc.
- Mobile Print has great use also in the network of our company building. Colleagues do not have to return to their workplace every time they need to print something – it is enough if they have a mobile phone with them and they send the print job directly from it.
- Because I am constantly on the move, I enjoy the same benefits of Mobile Print as our employees.

User

- The option to print anything “on the fly” – whether at a distance from home, on the way to work or from the corridor in the company – it facilitates my work greatly. It will not happen to me that I will come to a meeting unprepared, because I will send the document to print immediately, for example, when I get it by email in an attachment.
- Via mobile print, I can print from any device that I have just at hand. I am not bound to the corporate network, so I only need a smart phone with the Internet and I send the job to a working printer, for example, from the train by which I travel every morning.
- Thanks to Mobile Print, I can even print documents for which I do not have the software installed on my device (see supported formats in section properties).
- As a student, I appreciate that via mobile printing, I can print also on the printers at school without the need to install print drivers.

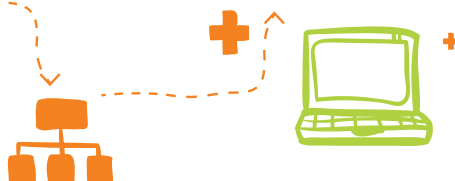

+ Recommended combination with other modules

+ the Authentication and Print Roaming modules – secure sensitive data

So that you can really fully enjoy the benefits of the Mobile Print module, we recommend the triple combination with the Authentication and Print Roaming modules. You will not have to log in from your mobile device and choose a printer; you just simply log in to any printer that you are just passing and you can print the waiting document right there.

+ the Rule-based Printing module – optimize print costs

Rule-based Printing will allow you to set up rules for different users or user roles. If you want to be able to set, for instance, that the jobs within Mobile Print will be automatically channeled to double-sided printing, or black and white printing, use this module.
